INTERNAL EXAMINATION 2022-23

Name of the Student: Khan Nooren Shabbir Roll No.: 20

Class: FYBCA. Division: Date :

Subject: Add-on (Advance c) Paper: CA-207

Sign. of Sup.

Q.No.

Q.1

a]

①

A null pointer is a variable in the C programming language that has a value of zero or has an address that points to nothing.

b]

①

A pointer by assigning it a valid address. This is normally done via the address of operator (&). The address-of operator (&) operates on a variable, and return the address of the variable.

c]

①

In value called by value C is where in the arguments we pass value & that value can be used in function for performing the operations. values passed in the function are stored in temporary memory.

Q.2

a)

It's a type of polymorphism in which an operator is overloaded to give it the user-defined meaning. C++ allows us to specify more than one definition for a function name or an operator in the same scope, which is called function overloading and operator overloading respectively.

~~1~~

operator overloading is a compile-time polymorphism. For example, we can overload an operator '+' in a class like string so that we can concatenate two strings by just using +.

c)

Advantages:-

- 1- In persistent storage of a variable retains the updated value.
- 2- The value is globally available.

~~1~~

Disadvantage:-

- 1- Even we does not need the variable the storage for an external variable exists.
- 2- Side effect may be procedure unexpected output.
- 3- we can not modify the program easily.

Q. 3)

Q)

A static variable possesses the property of preserving its actual value even after it is out of its scope. Thus, the static variables are able to preserve their previous value according to their previous scope, and one doesn't need to initialize them again in the case of a new scope.

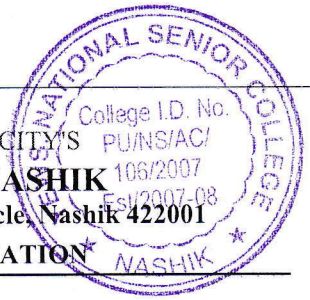

5)

A static variable is the one allocated "statically" which means its lifetime is throughout the program run. It is declared with the static keyword & persists its value across the function calls.

A static int variable remains in memory while the program is running. A normal or auto variable is destroyed when a function call where the variable was declared is over. Static variable is declared as, then a single copy of the variable is created and shared among all objects at a class level. Static variables are essentially, global variables. All instances of the class share the same static variable.

[Q:1]

$$Q1 = 1 + 2 + 2 + 2 = 7$$

1]

→ An algorithm is a set of instructions that a computer must follow to solve a problem.

2]

→ Here are some characteristics of an algorithm:

1] Definiteness:- Instruction must be clear, precise and easy to understand.

2] Finiteness:- Algorithm must end after a finite number of steps.

3] Input:- Algorithm can have zero or more inputs.

4] Output:- Algorithm must produce at least one output.

3] Some advantages of algorithm includes:

→ 1] Comprehensive:- Algorithms are comprehensive and guarantee the correct solution.

2] Easy to understand:- Algorithms are easy to understand because they are written in a universally spoken language.

3] Easy to develop:- Algorithms are easy to develop and maintain.

4] Algorithms are independent of any programming language.

4]

→ However, algorithms also have some disadvantages including:-

1] developing sophisticated algorithms can be challenging and time-consuming.

2] Algorithms can be difficult to understand for larger and complex problems.

2 ✓ 3] certain algorithms may require significant computational resources.

4] Lack of flexibility and adaptation to changing conditions.

$$Q2 = 3 + 3 + 3 + 3 = 12$$

[Q: 2]

1]

→ step 1: start

step 2: Declare a, b and c

step 3: Read a and b

step 4: c = a

a = b

b = c

step 5: print a and b

step 6: stop.

2]

→ step 1: start

step 2: Declare variable sum, temp, num

step 3: Read num from user.

step 4: Initialize variable

sum = 0 and temp = num

Step 5:

Repeat until $\text{num} \geq 0$

S.1: $\text{sum} = \text{sum} + \text{cube of last digit i.e. } [(\text{num} \% 10)^3]$

S.2: $\text{num} = \text{num} / 10$

Step 6: IF $\text{sum} = \text{temp}$ goto step 7 else step 8

Step 7: Print "Armstrong Number"

Step 8: Print "Not Armstrong Number"

Step 9: stop

a)

Ans-

1

The internet of things describes devices with sensors, processing ability, software and other technologies that connect and exchange data with other devices and systems over the internet or other communications networks.

b)

Ans-

1

Hypertext Transfer Protocol (HTTP) . Port 80 is the port number assigned to commonly used internet communication protocol.

c)

Ans-

1

A unique string of characters that identifies each computer using the Internet Protocol to communicate over a network.

2.

d)

Ans-

Communication protocols include basic data communication tools like TCP/IP and HTTP. Management protocols maintain and govern the network through protocols such as ICMP and SNMP. Security protocols include HTTPS, SFTP and SSL.

Internet protocols are a set of rules that governs the communication and exchange of data over the internet. There are many types :-

- TCP
- UDP
- IP
- HTTP
- IRC
- BGP
- ARP

c)

Ans-

Debugging is the process of finding and fixing errors or bugs in the source code of any software. When software does not work as expected, computer

programmers study the code of determination, why error occurred.

Debugging in computer programming and engineering is a multistep process that involves identifying a problem,

2.

isolating the source of the problem and then either correcting the problem or work around it.

In Software development, the debugging process begins when a developer locates a code error in computer program and is able to reproduce it.

2)

Ans. Web application design is one of the crucial stages for developing a web application. It mainly refers to the overall appearance of the web application. Web application design consists of two essential components: User interface (UI) and User Experience (UX). While working on this you must ensure that you follow the fundamental principles of designing.

④

It is the part of which user interact when using a web application.

The primary purpose of the designer is to create a user-friendly and attractive interface. For the same, they look after the fonts, buttons, colors, navigations, etc.
